DETAILED ACTION

Claim Objections

1. Claim 42 is objected to because of the following informalities: In claim 42, line 3, "present" should be "presence". Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 42-45, 47 and 48 are rejected under 35 U.S.C. 102(b) as being anticipated by GB 2081278.

GB '278 teaches a method of making a coated oil field polymer chemical, wherein a dispersing agent is coated upon at least a part of the surface of the oil field chemical (page 2, line 39-84 and examples). The stirring and mixing would cause some comminution of the oil field chemical.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 42-44, 47, 48 and 50-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jacobs (4770796).

Jacobs teaches a method of making an encapsulated oil field breaker which comprises coating the surface of the breaker with a fatty acid dispersing agent, under conditions in which the breaker is comminuted (column 6, lines 22-54). Jacobs differs from the present invention in that the specific relative amounts of coating to particles is not specifically disclosed. However, Jacobs teaches that the concentration of fatty acids and coating may be varied depending on the rate of release of particles desired (column 5, lines 52-64). It would thus be obvious to one of ordinary skill in the art to vary the amount of coating of the particles, in order to regulate the rate of release of particles, as taught by Jacobs.

6. Claims 46, 49 and 53-58 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
